### REC\_DS using C\_Week 2\_COD\_Question 5

Attempt : 2  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Ashwin is tasked with developing a simple application to manage a list of items in a shop inventory using a doubly linked list. Each item in the inventory has a unique identification number. The application should allow users to perform the following operations:

Create a List of Items: Initialize the inventory with a given number of items. Each item will be assigned a unique number provided by the user and insert the elements at end of the list.

Delete an Item: Remove an item from the inventory at a specific position.

Display the Inventory: Show the list of items before and after deletion.

If the position provided for deletion is invalid (e.g., out of range), it should

display an error message.

### ***Input Format***

The first line contains an integer  $n$ , representing the number of items to be initially entered into the inventory.

The second line contains  $n$  integers, each representing the unique identification number of an item separated by spaces.

The third line contains an integer  $p$ , representing the position of the item to be deleted from the inventory.

### ***Output Format***

The first line of output prints "Data entered in the list:" followed by the data values of each node in the doubly linked list before deletion.

If  $p$  is an invalid position, the output prints "Invalid position. Try again."

If  $p$  is a valid position, the output prints "After deletion the new list:" followed by the data values of each node in the doubly linked list after deletion.

Refer to the sample output for the formatting specifications.

### ***Sample Test Case***

Input: 4

1 2 3 4

5

Output: Data entered in the list:

node 1 : 1

node 2 : 2

node 3 : 3

node 4 : 4

Invalid position. Try again.

### ***Answer***

```
// You are using GCC
```

```
void DListcreation(int n) {  
    struct node*temp=NULL;
```

```

for(int i=0;i<n;i++)
{
    temp=(node*) malloc (sizeof(node));
    scanf("%d",&temp->num);
    temp->preptr=NULL;
    temp->nextptr=NULL;
    if(stnode==NULL)
    {
        stnode=enode=temp;
    }
    else
    {
        enode->nextptr=temp;
        enode=temp;
    }
}
}

```

```

void DListDeleteAnyNode(int pos)
{
    if(stnode==NULL)
    {
        return ;
    }
    if(pos==1)
    {
        DListDeleteFirstNode();
        return ;
    }
    node*temp=stnode;
    for(int i=0;i<pos-2;i++)
    {
        temp=temp->nextptr;
    }
    if(temp->nextptr->nextptr==NULL)
    {
        temp->nextptr=NULL;
        return ;
    }
    node*a=temp->nextptr;
    temp->nextptr=a->nextptr;
    a->nextptr->preptr=temp;
}

```

```
}
```

```
void DListDeleteFirstNode()
```

```
{
```

```
    if(stnode==NULL)
```

```
    {
```

```
        return ;
```

```
    }
```

```
    struct node*temp=stnode;
```

```
    if(stnode==ennode)
```

```
    {
```

```
        ennode=NULL;
```

```
        stnode=NULL;
```

```
        return ;
```

```
    }
```

```
    stnode=stnode->nextptr;
```

```
    stnode->preptr=NULL;
```

```
    free(temp);
```

```
}
```

```
void DListDeleteLastNode()
```

```
{
```

```
    if(stnode==NULL)
```

```
    {
```

```
        return ;
```

```
    }
```

```
    if(stnode==ennode)
```

```
    {
```

```
        ennode=NULL;
```

```
        stnode=NULL;
```

```
        return ;
```

```
    }
```

```
    struct node*temp=ennode->preptr;
```

```
    temp->nextptr=NULL;
```

```
    free(temp);
```

```
}
```

```
void displayDList(int m)
```

```
{
```

```
    if(m==1)
```

```
    {
```

```
        printf("Data entered in the list:\n");
```

```
    }
```

```
else if(m==2)
{
    printf("After deletion the new list:\n");
}
struct node*a=stnode;
int i=1;
while(a!=NULL)
{
    printf("node %d:%d\n",i,a->num);
    a=a->nextptr;
    i++;
}
}
```

**Status :** Correct

**Marks :** 10/10
