Attempt : 2
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Your task is to create a program to manage a playlist of items. Each item is represented as a character, and you need to implement the following operations on the playlist.

Here are the main functionalities of the program:

Insert Item: The program should allow users to add items to the front and end of the playlist. Items are represented as characters. Display Playlist: The program should display the playlist containing the items that were added.

To implement this program, a doubly linked list data structure should be used, where each node contains an item character.

Input Format

The input consists of a sequence of space-separated characters, representing the items to be inserted into the doubly linked list.

The input is terminated by entering - (hyphen).

Output Format

The first line of output prints "Forward Playlist: " followed by the linked list after inserting the items at the end.

The second line prints "Backward Playlist: " followed by the linked list after inserting the items at the front.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: a b c -

Output: Forward Playlist: a b c

Backward Playlist: c b a

Answer

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
struct Node {  
    char item;  
    struct Node* next;  
    struct Node* prev;  
};
```

```
// You are using GCC
```

```
void insertAtEnd(struct Node** head, char item) {  
    struct Node* newNode=(struct Node*)malloc(sizeof(struct Node));  
    newNode->item=item;  
    newNode->next=NULL;  
    newNode->prev=NULL;
```

```
    if(*head==NULL)  
    {  
        *head=newNode;
```

```

    return ;
}
struct Node*temp=*head;
while(temp->next!=NULL)
{
    temp=temp->next;

}
temp->next=newNode;
newNode->prev=temp;
}
void insertAtfront(struct Node**head,char item)
{
    struct Node*newNode=(struct Node*)malloc(sizeof(struct Node));
    newNode->item=item;
    newNode->next=*head;
    newNode->prev=NULL;

    if(*head!=NULL)
    {
        (*head)->prev=newNode;
    }
    *head=newNode;
}
void displayForward(struct Node* head) {
    while(head!=NULL)
    {
        printf("%c",head->item);
        if(head->next==NULL)break;
        head=head->next;
    }
    printf("\n");
}

```

```

void displayBackward(struct Node* tail) {
    while(tail!=NULL)
    {
        printf("%c",tail->item);
        tail=tail->prev;
    }
    printf("\n");
}

```

```

}

void freePlaylist(struct Node* head) {
    //type your code here
    while(head!=NULL)
    {
        struct Node*temp=head;
        head=head->next;
        free(temp);
    }
}

int main() {
    struct Node* playlist = NULL;
    char item;

    while (1) {
        scanf(" %c", &item);
        if (item == '-') {
            break;
        }
        insertAtEnd(&playlist, item);
    }

    struct Node* tail = playlist;
    while (tail->next != NULL) {
        tail = tail->next;
    }

    printf("Forward Playlist: ");
    displayForward(playlist);

    printf("Backward Playlist: ");
    displayBackward(tail);

    freePlaylist(playlist);

    return 0;
}

```
